PAUL BRADLEY

bradleypauld@gmail.com | Austin, TX, USA

EDUCATION

Harding University **August 2010 - May 2015**

Bachelor's, Computer Science

PROFESSIONAL EXPERIENCE

Taptab **June 2025 - Present**

Senior Full Stack Engineer *Austin, TX*

- Lead end-to-end delivery of a pre-seed restaurant management and ordering platform, partnering directly with the CEO on React/TypeScript architecture, data modeling, and product direction.
- Designed and operate an AI/LLM-driven development pipeline (jira-bot) that automates ticket implementation, integration and regression testing, and PR creation, reducing manual engineering to ticket writing and PR review while increasing throughput and extending startup runway.
- Integrate third-party APIs into React/TypeScript workflows, expanding platform capabilities and streamlining restaurant onboarding and ordering.
- Own user data modeling and storage design, maintaining data integrity and scalability as the platform grows.
- Overhauled the core React/TypeScript component library, improving consistency, reusability, and developer velocity across the product.

Amazon **January 2024 - March 2024**

Frontend Developer *Remote*

- Engineered a reusable JavaScript component library for Amazon’s desktop retail store, standardizing responsive UI against UX specifications and documenting patterns that enabled cross-team adoption.
- Delivered checkout components and pixel-perfect workflows for Amazon’s retail system, following design specifications and coding standards through cross-functional collaboration.
- Built unit and integration tests across the component library, achieving 95% test coverage and strengthening code quality and compliance with Amazon development practices.
- Contributed frontend engineering expertise to large-scale e-commerce systems serving millions of users.

Zoro **March 2024 - June 2025**

Senior Frontend Engineer *Austin, TX*

- Led frontend modernization for a B2B industrial e-commerce platform serving enterprise customers, shaping React/TypeScript architecture and applying data-driven experimentation to optimize conversion across the purchasing journey.
- Upgraded the React/TypeScript codebase to the latest version, strengthening performance, type safety, and developer experience while supporting a companion Vue 2-to-3 migration.
- Designed and A/B tested React checkout components to address cart abandonment, using checkout experimentation to improve bottom-of-funnel conversion.
- Partnered with product and design teams to guide technical decisions and optimize the B2B e-commerce experience for enterprise purchasing needs.
- Ran systematic A/B tests across key purchasing-workflow conversion points, using results to inform data-driven UI improvements.

KERV Interactive **November 2022 - January 2024**

Frontend Technical Lead *Remote*

- Directed front-end architecture and product direction, shaping UI/UX design, mentoring junior developers, and guiding end-to-end implementation strategy across the team.
- Migrated five core REST endpoints to GraphQL, reducing API response times by 20% and designing schemas that supported adoption of a microservices architecture.

- Streamlined workflows and removed bottlenecks, reducing average ticket development time from five days to three days.
- Coordinated cross-departmental support and project planning, authored technical tickets, and ensured timely delivery of initiatives.

ZenBusiness **February 2021 - November 2022**

Senior Full Stack Developer *Remote*

- Architected complex React and TypeScript components with Apollo Client and Material UI, while mentoring junior developers in partnership with the Director of Engineering.
- Improved frontend performance and accessibility using React best practices, including code splitting, lazy loading, and semantic HTML, increasing Lighthouse scores.
- Led migration from REST to GraphQL, modernizing data loading and API access through Apollo Server and custom GraphQL fragments.
- Owned Node.js and Express microservices for web hosting integration, delivering backend services on GCP with PostgreSQL, SQL, and Kubernetes.

National Cash Register **July 2019 - February 2021**

Full Stack Web Developer II *Remote*

- Led development of complex React and Vue.js applications with Redux, shaping core component architecture for large-scale transaction systems and supporting reliable transaction processing.
- Guided React and Vue component architecture across application development, improving UI consistency and team efficiency.
- Developed and maintained Node.js microservices for payment processing integration, strengthening reliability across payment workflows.
- Built RESTful APIs with Express and supporting Python services, applying computer science principles to optimize performance in large-scale transaction systems.

PerfectVision **May 2015 - July 2019**

Full Stack Web Developer *Little Rock, AR, USA*

- Applied Scrum methodologies to improve team velocity and delivery consistency, enabling predictable planning and coordinated execution across development work.
- Established testing and development workflows that strengthened code reliability and deployment stability across application releases.
- Built scalable, high-performance web applications using JavaScript, CSS, and React, delivering responsive and reliable user experiences.
- Resolved complex technical challenges through adaptable development strategies, meeting implementation needs while maintaining delivery goals.

SKILLS

Skills: Agile, Angular, Apache Kafka, ASP.NET, C#, DevOps, Docker, Express.js, FastAPI, Flask, Git, Google Cloud Platform, GraphQL, HTML/CSS, Java, Kubernetes, MailChimp, Mixpanel, MySQL, .NET, Next.js, Node.js, NoSQL, Postgres, Python, React.js, Redux.js, REST APIs, Ruby, SCRUM, Sentry, Spring, SQL, TypeScript, Vue.js, Terraform, Go, Azure, AWS, MariaDB, CI/CD, .NET/C#, serverless architectures
